

DATA SHEET

They are wire systems used in areas requiring security. They are mounted on the wall or directly on the floor. It has carrier columns. These columns are mounted on the floor with chemical dowels. Rocket wires are manufactured according to special dimensions. It is produced entirely by hand workmanship. They are mounted on steel frames manufactured according to wire dimensions. The rocket holder is mounted on the frame with wire spring tensioners. The frame is ready. Then, This frame is mounted to the supporting column posts with screws.

The rocket cutter wire system is designed to neutralize all types of rockets. G-100 rocket cutter wire system is the patented product of our company. Rocket cutter steel blades cut the front of the rocket when the rocket hits the wire. This front aluminum part is responsible for firing the part that activates the rear main fuse. With this disabled, the rocket cannot be fired. It is disabled with a small explosion. Even the simplest rocket can pierce 40 cm of steel. For a single-acting RPG-7 rocket system, a single string system is sufficient. Our wire systems with the M72 Anti-tank rocket have been tested and approved by the 3rd party authorized laboratory.

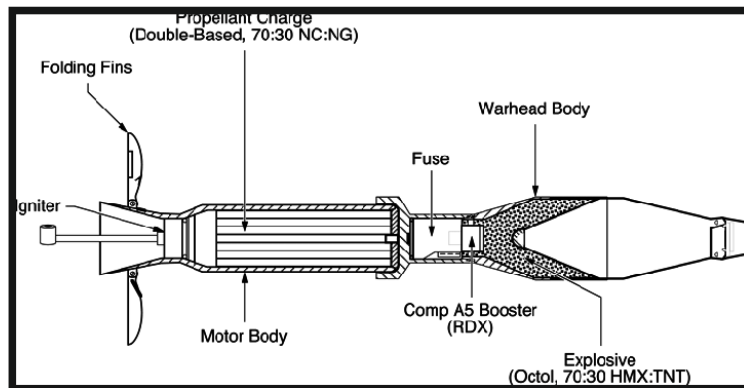

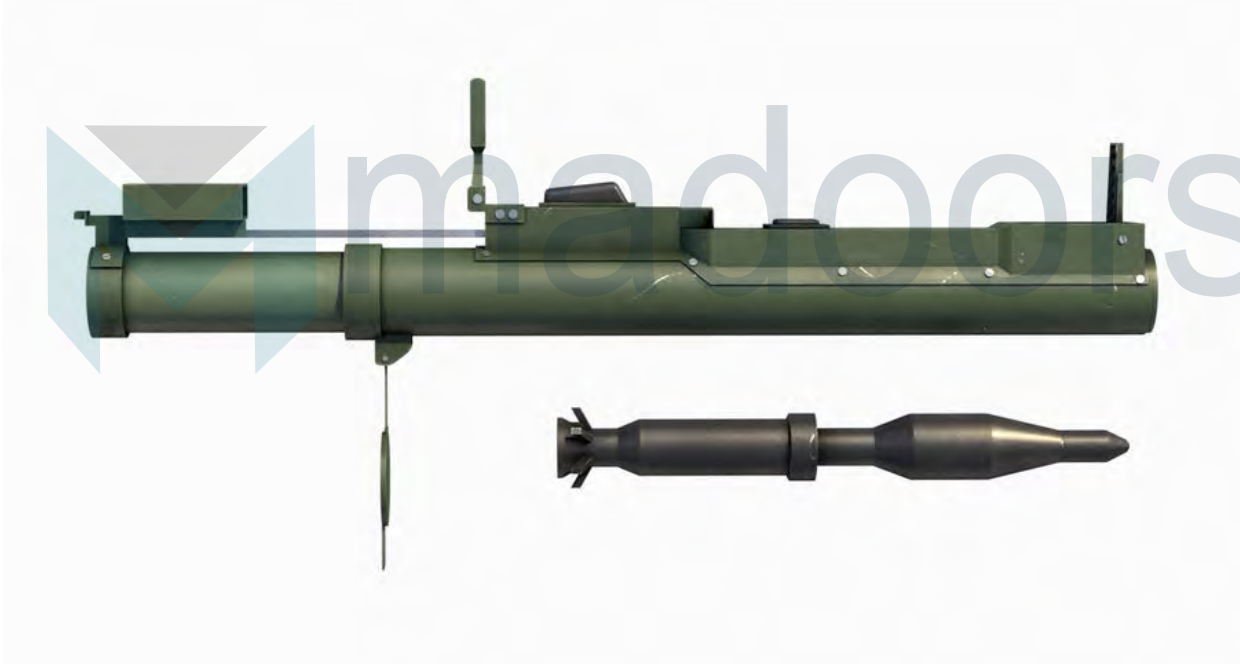

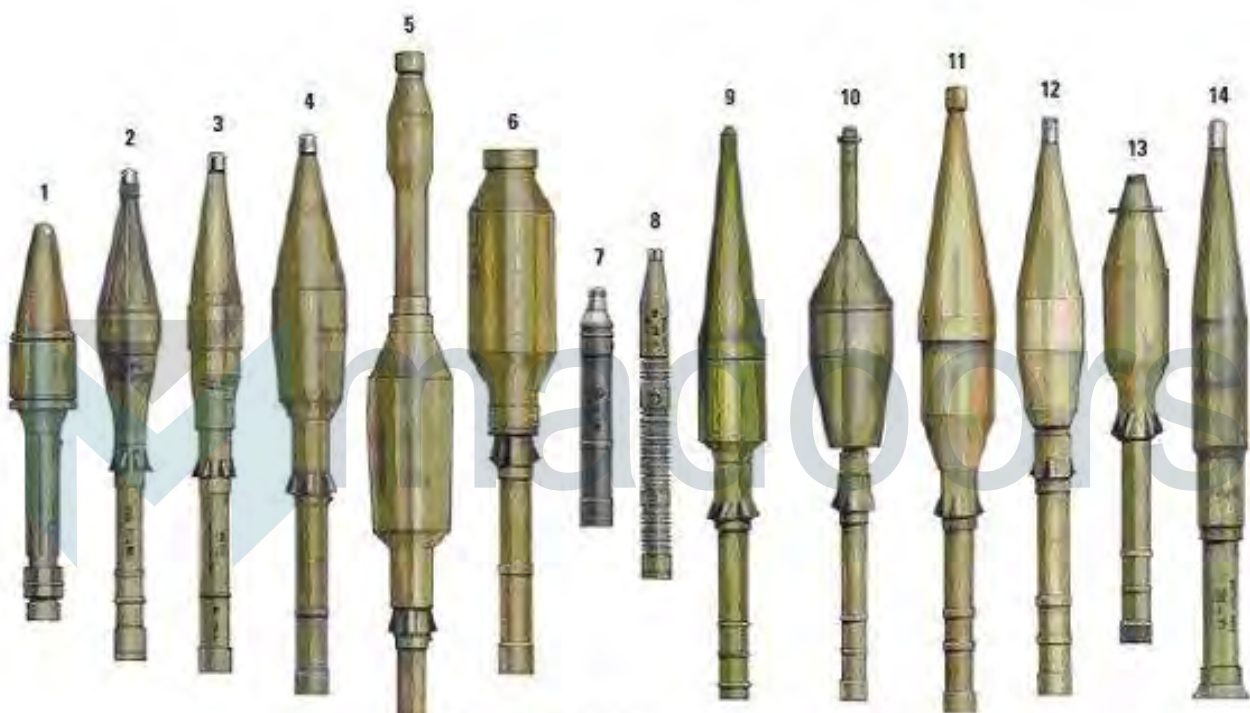

Figure 1. M 72 Anti-Tank Rocket

Other rocket systems are shown in the attached figure-2. The most powerful and dangerous rocket among these rockets is undoubtedly the number 5 PG-7R Tandem. If you want to protect against tandem . You need to use 2 rows of wire. The first row of wire cuts the tandem . The second row of wire catches the tandem.
